Airknives

Airknife Overview

ACI Airknives are a proven drying solution for many applications within the Beverage and Filling Industries

They can be used on their own, or used in conjunction with other ACI products such as JetPlate, Can Drying Tunnels neck and cap dryers.

The benefits of ACI Airknives include their ability to deliver a continuous curtain of air at an even pressure over the whole product. In addition angled adjustment permits air delivery to be varied to maximise efficiency according to the product dimensions.

Stainless steel (304 or 316) Airknives

Airknives commonly employed in the Food and Beverage Industry and will therefore be regularly subjected to thorough clean down operations.

ACI are therefore able to offer Airknives fabricated from either 304 or dairy standard 316 Stainless Steel, a material which can readily withstand these sorts of environment.

All of ACI's airknife designs can be readily adapted to suit specific individual customer needs.

- Material Stainless Steel 304 S11 1-4307 BSI449
- Various mounting and inlet configurations available
- Airknife lengths available in 10mm increments
- Alternative positions for inlets available

Anodised Aluminium Airknives can also be supplied and adapted to suit individual customer needs. Although this material does not have the same hard wearing characteristics of Stainless Steel, they can still be a cost-effective solution for many Food and Beverage applications.
